MK-TLX General Purpose Blade with Super High Segments

MK Diamond Products, Inc. introduces the new MK-TLX Turbo Segmented Diamond Blade. This series of general purpose blades is best for fast, smooth cutting on a wide variety of masonry construction materials. They cut concrete, brick, pavers, sandstone, stucco, roof tile and block. “These blades work best for light to medium duty saw cutters who need to work with a wide variety of construction materials while minimizing blade costs and blade changes,” states Brian Delahaut, Vice President MK Diamond Products, Inc.

The MK-TLX wet/dry cutting diamond blade features a slanted keyhole designed gullet that provides easy slurry removal and air circulation for heat dissipation. The tall segment height provides long cutting life; 9” and smaller diameter blades have a 13mm segment height and the 10” to 14” diameter blades are 15mm. They are engineered to provide optimum cutting performance under most conditions while maintaining an extra long service life.

MK Diamond continues to provide our distributors with the best value, quality products and customer service the industry has to offer. MK Diamond Products, Inc. is a recognized world leader in the manufacturing of precision diamond blades and equipment for cutting, coring and polishing all types of masonry, concrete, tile and stone products. For more information call 800/421-5830 or visit www.mkdiamond.com.
